Welcome to the Citizenre Customer's Area.

The most important thing you will find is the ability to monitor your usage of electricity. Through our advanced metering technology we collect daily, hourly, and almost real-time usage data. We will then report that directly to you through this site.

For you, knowing exactly what you have consumed and when it was consumed will have significant value to you. For example, you can identify whether there are opportunities for other tariff options to reduce costs. In addition, studies show that homeowners are likely to conserve more energy when they can easily monitor their consumption. So not only do you have the ability to save money, but it is likely that you will begin conserving energy.

Advanced metering is a key step to modernizing our energy infrastructure. Identifying consumer behavior will improve the process of managing demand for natural resources, and will lead to an improved quality of service. It is a win-win situation – utilizes saved resources and customers save money on their bills. This is why we make it such a critical component of our service offering to you.

We recommend that you utilize this area as much as possible. Because besides reporting to you your information on a nightly basis, we will also provide tips and tricks for reducing energy consumption and choosing a tariff option that gives you the most bang for your buck. In certain regions, the combination of metering and time-of-use tariff may conceivably provide you with the opportunity to receive more electricity than what you produce. This means paying far less for your electricity needs than what you have paid for it in the past. We look forward to helping you discover if your utility makes the opportunity available to you.

There are a number of other things that you can do here, as well. The following are just a few things that can be done.

- Stay in touch with news and updates regarding your installation
- Update your customer information and profile
- Retrieve and pay your bills
- Provide feedback to us on what we can do better

So, please take advantage of the Customer's Area. We look forward to delivering you with timely and valuable information. And thank you, once again, for being a part of Citizenre.

Represents the number of trees you would have to plant to equal the amount of fossil-fuel generated electricity we are displacing. Represents the number of automobiles you would have to take off the road to displace the amount of barrels of oil we are displacing.

For every person you refer who has a system installed, 5% of their electrical bill is deducted from your utility bill.

That means you could “zero-out” your bill with enough referrals.
